11 Distributions and Analytic Functions For reasons explained earlier we introduced various classes of distributions as elements of the topological dual of suitable test function spaces.

Analytic Functions of a Complex Variable 1 Definitions and Theorems 1.1 Definition 1 A function $f(z)$ is said to be analytic in a region R of the complex plane if $f(z)$ has a derivative at each point of R and if $f(z)$ is single valued. 1.2 Definition 2 A function $f(z)$ is said to be analytic at a point z if z is an interior point of some region ...

only be tested against analytic functions $g \hat{a} \hat{a} C \hat{I} \% ([\hat{a} \hat{a} 1, 1])$ rather than test functions $g \hat{a} \hat{a} C \hat{a} \hat{z} ([\hat{a} \hat{a} 1, 1])$. However as the class of analytic functions is so sparse, hyperfunctions tend not to be as useful as distributions in analysis. At first glance, the concept of a distribution has limited utility, as all a distribution

The probability distribution (frequency of occurrence) of an individual variable, X , may be obtained via the pdf function. Given two variables X and Y , the bivariate joint probability distribution returned by the pdfxy function indicates the probability of occurrence defined in terms of both X and Y . Generally, the larger the array(s) the smoother the derived PDF.

PDF generates a histogram or probability density function for \hat{X} , where \hat{X} is a sample of data. CDF generates a cumulative distribution function for \hat{X} . They are similar to the methods used to generate the uncertainty views PDF and CDF for uncertain quantities.
