Differential geometry is a mathematical discipline that uses the techniques of differential calculus, integral calculus, linear algebra and multilinear algebra to study problems in geometry. The theory of plane and space curves and surfaces in the three-dimensional Euclidean space formed the basis for development of differential geometry during the 18th century and the 19th century.

In mathematics, the differential geometry of surfaces deals with the differential geometry of smooth surfaces with various additional structures, most often, a Riemannian metric. Surfaces have been extensively studied from various perspectives: extrinsically, relating to their embedding in Euclidean space and intrinsically, reflecting their properties determined solely by the distance within ...

In geometria differenziale il tensore di Ricci  $R_{ij}$  è un tensore che misura la curvatura di una varietà riemanniana. Si ottiene contraendo due indici del tensore di Riemann. Il tensore di Ricci, che deve il suo nome a Gregorio Ricci Curbastro,  $R_{ij}$  è un ingrediente dell'equazione di campo di Einstein ed  $R_{ij}$  è quindi importante per la formulazione della relatività generale.

In geometria differenziale, il tensore di Riemann  $R_{ijkl}$  è un tensore di tipo (1,3) che codifica nel modo più completo la curvatura di una varietà riemanniana. Prende il nome da Bernhard Riemann ed  $R_{ijkl}$  è generalmente indicato (nella notazione con indici) tramite il simbolo:  $R_{ijkl}$ . Tutte le altre entità che descrivono la curvatura di

una varietà possono essere dedotte dal tensore di Riemann, ad esempio il ...
