Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

The tutorial on delimited continuations was given together with Kenichi Asai (Ochanomizu University, Japan) in the evening before the Continuation Workshop 2011. The concept of continuations arises naturally in programming: a conditional branch selects a continuation from the two possible futures ...

In computing, reactive programming is a declarative programming paradigm concerned with data streams and the propagation of change. With this paradigm it is possible to express static (e.g., arrays) or dynamic (e.g., event emitters) data streams with ease, and also communicate that an inferred dependency within the associated execution model exists, which facilitates the automatic propagation ...

The present code is an implementation of MonadPlus and the MonadPlus transformer with fair conjunctions and disjunctions and with distinct good termination properties. This implementation terminates whereas more conventional MonadPlus realizations (e.g., the List monad) diverge. Here's an example ...

Chaos theory is a branch of mathematics focusing on the behavior of dynamical systems that are highly sensitive to initial conditions. "Chaos" is an interdisciplinary theory stating that within the apparent randomness of chaotic complex systems, there are underlying patterns, constant feedback loops, repetition, self-similarity, fractals, self-organization, and reliance on programming at the ...

I don't understand post like this. If programming was easy, it's just the people problems that are hard, why not always have 1 programmer? If adding people just makes it harder?
