2.2. Method I: Vector Optimisation. The vector optimisation is a multi-objective optimisation approach that implies the independent treatment of the different objectives (Marler and Arora, 2004). Within this article, it refers to the independent optimisation of an environmental and economic indicator to identify Pareto-optimal solutions.

Critical Analysis of Methods for Integrating Economic and

In economics, an input-output model is a quantitative economic model that represents the interdependencies between different branches of a national economy or different regional economies. Wassily Leontief (1906-1999) is credited with developing this type of analysis and earned the Nobel Prize in Economics for his development of this model.
