What is Heimdal? Heimdal is an implementation of Kerberos 5 (and some more stuff) largely written in Sweden (which was important when we started writing it, less so now). It is freely available under a three clause BSD style license. Other free implementations include the one from MIT, and Shishi. Also Microsoft Windows and Sun's Java come with implementations of Kerberos.

A comet is an icy, small Solar System body that, when passing close to the Sun, warms and begins to release gases, a process called outgassing. This produces a visible atmosphere or coma, and sometimes also a tail. These phenomena are due to the effects of solar radiation and the solar wind acting upon the nucleus of the comet.
