50 Competitive Intelligence Analysis Techniques

Analytical chemistry studies and uses instruments and methods used to separate, identify, and quantify matter. In practice, separation, identification or quantification may constitute the entire analysis or be combined with another method.

Development of single-enantiomer drugs was also made possible by asymmetric synthesis and chiral separation techniques. Several guidelines dealing with chiral drugs (FDA's, 1992, Health Canada, 2000, European medicines agency, 1996) have been published which encouraged the development of single enantiomer drugs for pharmaceutical manufacturers.. The quality of chiral drugs was stipulated by ...

The "Result" column is the amount the substance found in mg/L (milligrams per liter). The units here are important. Sometimes concentration is measured in ppm (parts per million), which is the same as mg/L.

Chromatography is a laboratory technique for the separation of a mixture. The mixture is dissolved in a fluid called the mobile phase, which carries it through a structure holding another material called the stationary phase. The various constituents of the mixture travel at different speeds, causing them to separate.
