

the nature of demography pdf

Demography (from prefix demo-from Ancient Greek δῆμος, dēmos meaning "the people", and -graphy from γράφω, graphō, implies "writing, description or measurement") is the statistical study of populations, especially human beings. As a very general science, it can analyze any kind of dynamic living population, i.e., one that changes over time or space (see population dynamics).

The USAID estimated a population growth rate of 3% per year and a doubling time of 25 years. This is also true nationally. "This rapid population growth rate has led to severe land shortages and rapid natural resource degradation. In the Amhara region, 94 percent of households have insufficient land to meet their food needs.

Galton also published a great number of scholarly papers, popular articles, letters and interviews on the subject of fingerprints. This was important groundwork, and prepared the way for the positive findings of the Parliamentary committee of 1894, which soon led to the acceptance of fingerprint testimony in the courts, to identify recidivists, and later to their forensic use.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
